International application No. PCT/US99/04996

III.	No.	on-establishment of opinion with regard to novelty, inventive step and industrial applicability		
1. T	1. The questions whether the claimed invention appears to be novel, to involve an inventive step (to be non obvious), or to be industrially applicable have not been and will not be examined in respect of:			
		the entire international application.		
	x]	claims Nos. <u>3-6, 8, 9 (IN PART) AND 21</u>		
		because:		
		the said international application, or the said claim Nos. relate to the following subject matter which does not require international preliminary examination (specify).		
		the description, claims or drawings (indicate particular elements below) or said claims Nos. are so unclear that no meaningful opinion could be formed (specify).		
		the claims, or said claims Nos are so inadequately supported by the description that no meaningful opinion could be formed.		
X	]	no international search report has been established for said claims Nos. (See Attached).		
2. A	2. A meaningful international preliminary examination cannot be carried out due to the failure of the nucleotide and/or amino acid sequence listing to comply with the standard provided for in Annex C of the Administrative Instructions:			
	]	the written form has not been furnished or does not comply with the standard.		
	]	the computer readable form has not been furnished or does not comply with the standard.		

Inc. ational application No.
PCT/US99/04996

IV. Lack of unity of invention
1. In response to the invitation to restrict or pay additional fees the applicant has:
restricted the claims.
paid additional fees.
paid additional fees under protest.
neither restricted nor paid additional fees.
2. X This Authority found that the requirement of unity of invention is not complied with and chose, according to Rule 68. not to invite the applicant to restrict or pay additional fees.
3. This Authority considers that the requirement of unity of invention in accordance with Rules 13.1, 13.2 and 13.3 is
complied with.
x not complied with for the following reasons:
This application contains the following inventions or groups of inventions which are not so linked as to form a single inventive concept under PCT Rule 13.1. In order for all inventions to be examined, the appropriate additional examination fees must be paid.
Group I, claim(s)1-6, drawn to cDNA and uses of antisense molecules.  Group II, claim(s) 7, drawn to use of RNA or DNA probes.  Group III, claim(s) 8 and 9, drawn to uses of ribozymes.  Group IV, claim(s) 10-12 and 16-20, drawn to antibodies and uses of said antibodies.  Group V, claim(s) 13-15, drawn to vectors.
The inventions listed as Groups I-V do not relate to a single inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:
Pursuant to 37 C.F.R. 1.475(d), the ISA/US considers that where multiple products and processes are claimed, the main invention shall consist of the first invention of the category first mentioned in the claims and the first recited invention of each of the other categories related thereto. Accordingly, the main invention (Group I) comprises the first-recited product, polypeptides. Further pursuant to 37 C.F.R. 1.475(d), the ISA/US considers that any feature which the subsequently recited products and methods share with the main invention does not constitute a special technical feature within the meaning of PCT rule 13.2 and that each of such products and methods accordingly defines a separate invention.
4. Consequently, the following parts of the international application were the subject of international preliminary examination in establishing this report:
all parts.
x the parts relating to claims Nos. 1, 2, 3-6 (in part); 7; 8 and 9 (in part); 10-20.

International application	No.

Claims NONE  Claims NONE  Claims 16-18 lack an inventive step under PCT Article 33(3) as being obvious over Morris et al (1998) in view of Creighto (Encyclopedia of Molecular Biology). Morris et al. disclose antibodies to rNudC and their use to monitor the levels of the rNudC protein. It is standard practice to use the protein/gene from one species to clone said gene from another species (see Creighton, pg 484). Consequently, one of skill in the art would have used the rNudC polypeptide, polynucleotide, and antibodies disclosed by Morris et al. to isolate the human homologue of rNudC (hNudC) and raise antibodies to said protein using the methods disclosed by Morris et al.  Claims 1-15 and 19-20 meet the criteria set out in PCT Article 33(2)-(3), because the prior art does not teach or fairly suggest cDNA of hNudR, use of antisense, use of ribozymes, the use of antibodies to hNudC or vectors for the production of hNudC.  Claims 1-20 meet the criteria set out in PCT Article 33(4) for industrial applicability.  NEW CITATIONS  Encyclopedia of Molecular Biology, Edited by Creighton, T.E. John Wiley & Sons, Inc. (New York), Volume 1 pages	• • •		16 10

### VIII. Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Claims 17, 19 and 20 are objected to as lacking clarity under PCT Rule 66.2(a)(v) because practice of the claimed invention is not enabled as required under PCT Rule 5.1(a) for the reasons set forth in the following paragraph. Claims are drawn to use of antibody or probes to hNudC to detect patients with leukemia and to differentiate between standard and high risk ALL patients or to determine whether a patient required intense therapy. Disclosure does not provide an adequate basis for making such determinations.

Claims 3, 5 and 6 objected to under PCT Rule 66.2(a)(v) as lacking clarity under PCT Article 6 because the claims are indefinite for the following reason(s): Claim 3 fails to set the limitations for what is considered to be a "molecule". Claims 5 and 6 can refer to any gene its only means of identification is the symbol "HnudC".

#### **CLASSIFICATION:**

The International Patent Classification (IPC) and/or the National classification are as listed below: IPC(7): C07H 21/02; C07K 16/00; C12Q 01/68; G01N 33/53 and US Cl.: 536/23.1; 530/387.1; 435/6, 7.1

#### I. BASIS OF REPORT:

5. (Some) amendments are considered to go beyond the disclosure as filed: NONE

### III. NON-ESTABLISHMENT OF REPORT:

No international search report has been established for claim numbers 3-6, 8, 9 (IN PART) AND 21.
